

Step 1.

>>Create a new folder name **polibp** at **desktop**.

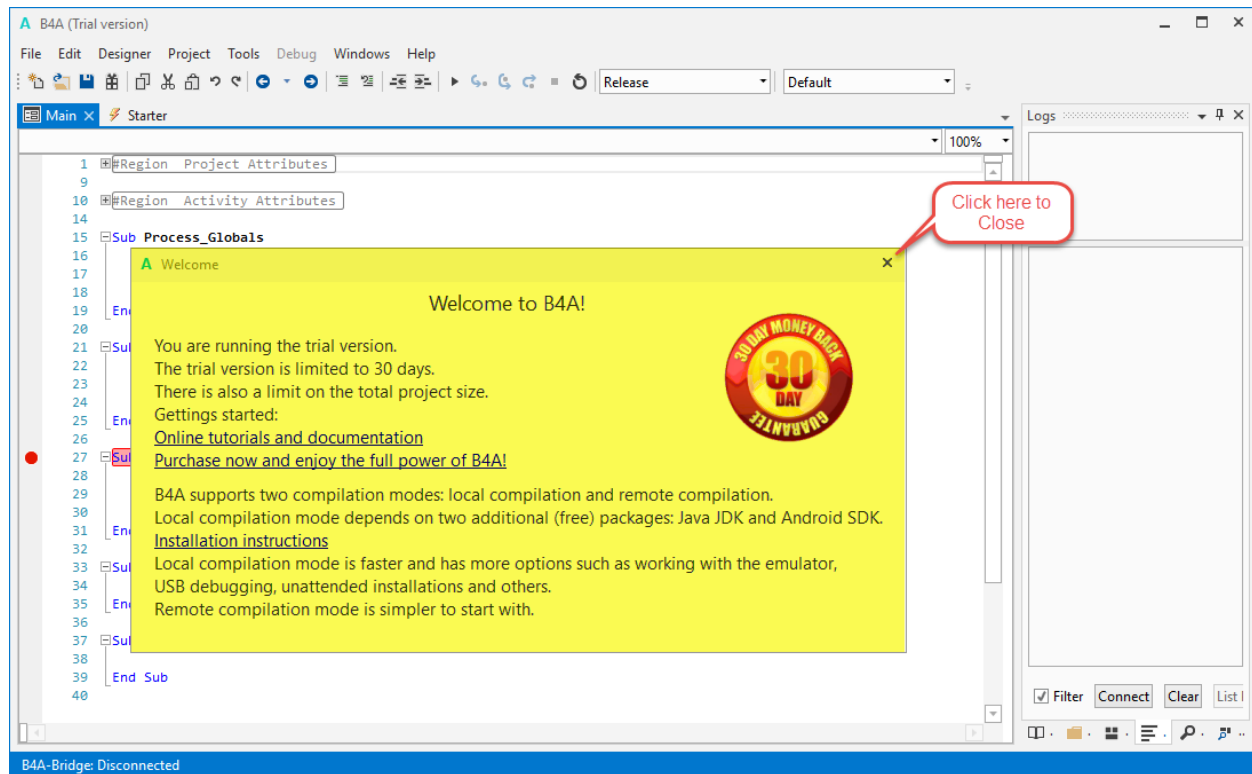

Step 2.

>>Double click the **B4A** shortcut.

Step 3.

>> Click **x** to close the **Welcome Window**.

Step 4.

>> Saving the project .

>> **File** >> **Save**.

>> Desktop >> create **New Folder** name **perda** & double click.

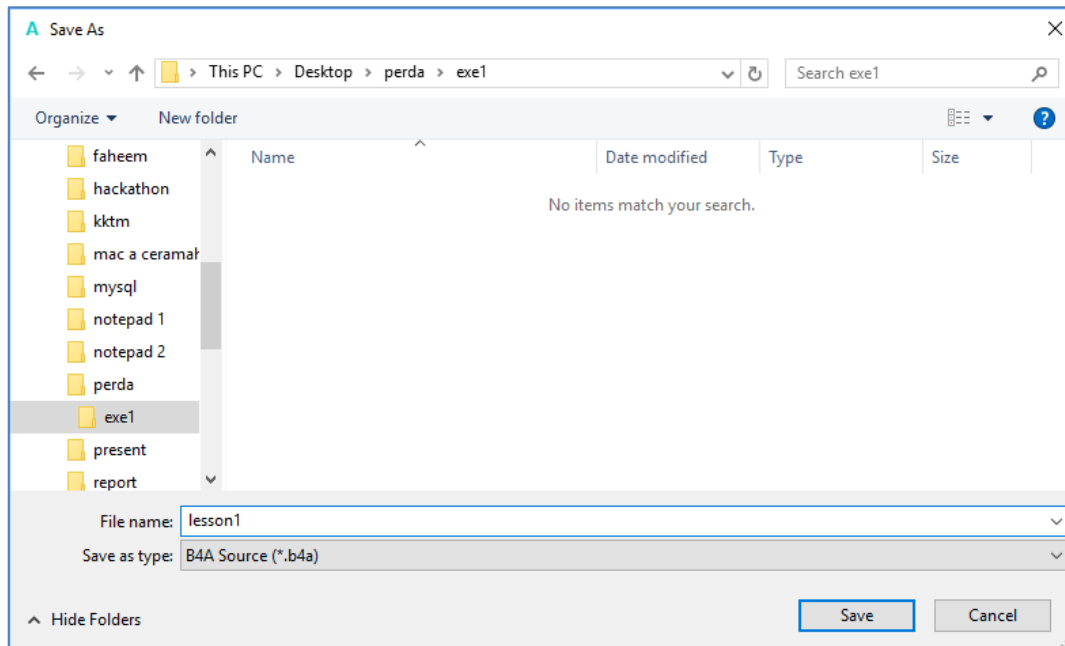

>> Create another **New Folder** name **exe1** & double click.

Step 5.

>> **File name** >> **lesson1.**

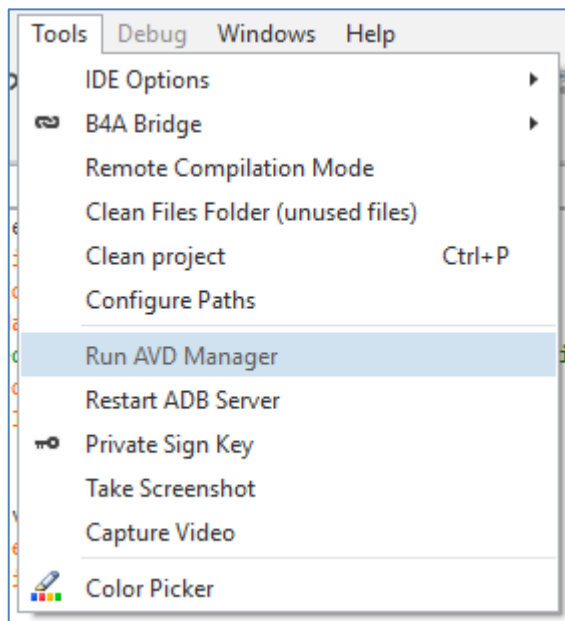

>> Press **Save.**

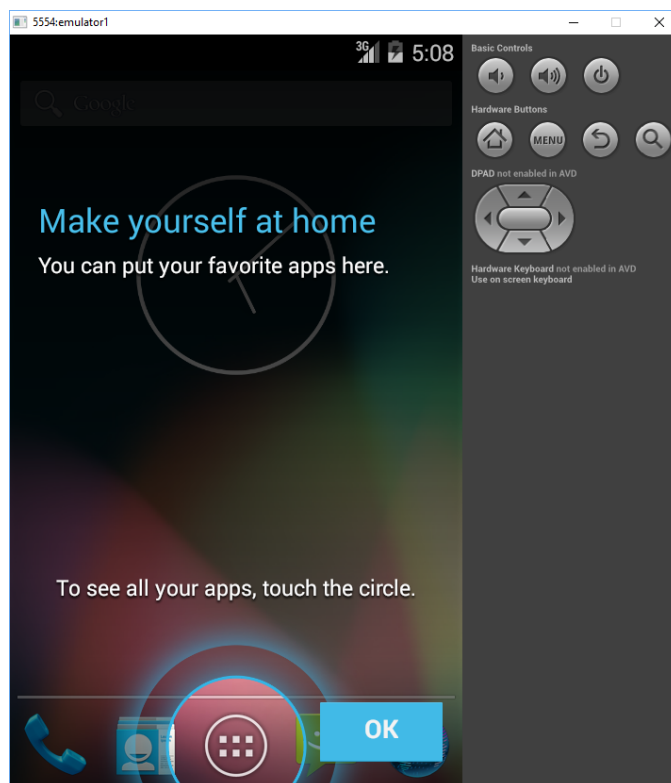

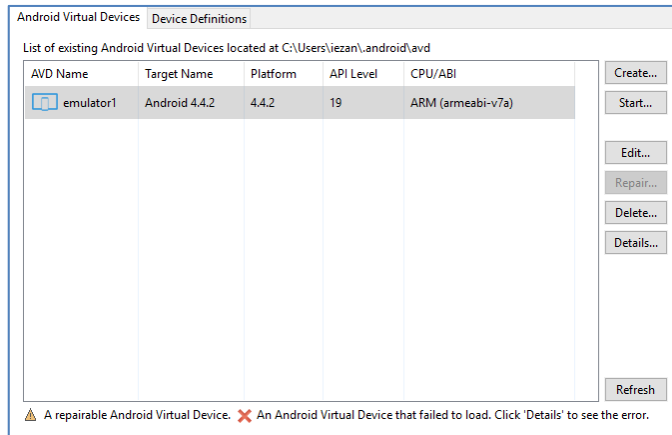

Step 6.

>> **Tools** >> **AVD Manager.**

>> Start the emulator.

Step 7.

>> Click **Run** & the app will be uploaded into the emulator

Step 8.

>> the app name: **B4A Example.**

Step 9.

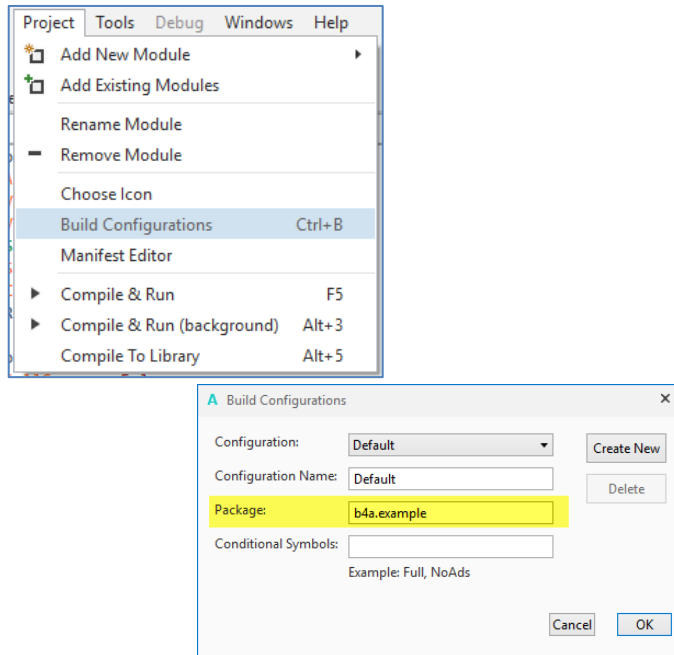

>> Important things to consider.

>>1. The Application Label.

```
1  #Region Project Attributes
2      #ApplicationLabel: B4A Example
3      #VersionCode: 1
4      #VersionName:
5      'SupportedOrientations possible values: unspecified, landscape or portrait.
6      #SupportedOrientations: unspecified
7      #CanInstallToExternalStorage: False
8  #End Region
9
10 #Region Activity Attributes
11     #FullScreen: False
12     #IncludeTitle: True
13 #End Region
14
15 Sub Process_Globals
16     'These global variables will be declared once when the application starts.
17     'These variables can be accessed from all modules.
18
19 End Sub
20
21 Sub Globals
22     'These global variables will be redeclared each time the activity is created.
23     'These variables can only be accessed from this module.
24
25 End Sub
26
27 Sub Activity_Create(FirstTime As Boolean)
28     'Do not forget to load the layout file created with the visual designer. For example:
29     'Activity.LoadLayout("Layout1")
30     MsgBox("Welcome to B4A!", "")
31 End Sub
32
33 Sub Activity_Resume
34
35 End Sub
36
37 Sub Activity_Pause (UserClosed As Boolean)
38
39 End Sub
40
```

Step 10.

>>2. The Build Configurations.

PACKAGE NAME:

This is the lowest level name if you will. Most users will never really see it. They usually look like:

com.ayedroid.butang

Top Level Domain – com

Sub Domain – ayedroid

App Name – butang

Important to note, you should always use only lowercase for the package name.

Application label :

This is simply the text that is shown to the user for your app e.g in the app drawer, in the uninstall menu e.t.c

Windows File Name (.b4a) :

This is your project file. It ties together all your bits off code into a lovely package. As you can imagine, it is exclusive to Basic4android but every IDE does something identical.

Activity Title :

This is quite different to the rest of these. It is part of the program rather than the filenames. If you want to change it you can either do it manually in the designer or use:

End of B4A – How To?
